1. Description

The main function of the UML Profile for PIM4SOA is to enable the development of the four aspects involved in the PIM4SOA metamodel using UML tools. The profile is based on UML2.0 and tailored for the Rational Software Modeler toolkit. The profile adds to the environment (palette) the elements of the aspects represented in the PIM4SOA metamodel. The UML profile is a graphical representation of PIM4SOA.

2. Datasheet

Name of result	PIM4SOA UML Profile for Rational Software Modeller
Contact	Xabier Larrucea
Contributors	ESI
Relationships to other projects	
Result type	UML profile
Software deployment	Sources included
Publicly available	Object files available
Status	Prototype
ACP url (if applicable)	http://athena.troux.com/Team/Repository/Projects/Project_209/Upl
Summary of functionality	<p>The main functionality of the UML profile for PIM4SOA is to be able to represent the four main aspects involved in the PIM4SOA metamodel: service, process, information and quality of service.</p> <p>This profile is defined based on UML2.0 and tailored for Rational Software Modeller environment. This specialisation adds to the environment (palette) the elements of the aspects represented in the PIM4SOA metamodel.</p>
Benefits and contributions to interoperability	Basically the UML profile is the graphical representation of PIM4SOA and therefore the benefits and contributions are based on the role played by the PIM4SOA within the architecture.
Validation and demonstration activities	The eprocurement scenario has been used to validate this approach.
Standardisation links	This profile is based on UML2.0 profiling facilities and then there is a link with UML2.0

	standard. http://www.omg.org/docs/ptc/03-09-15.pdf
Requirements and dependencies	This profile is specialised for Rational Software Modeller.
Comments	

3. Installation guide

3.1. External dependencies

The PIM4SOA UML profile has been implemented as a plugin for its use in the Rational Software Modeler (RSM) platform that is based on the Eclipse framework. This plugin customizes the RSM environment being able to use the UML profile for PIM4SOA.

- Rational Software Modeler (<http://www.ibm.com>)

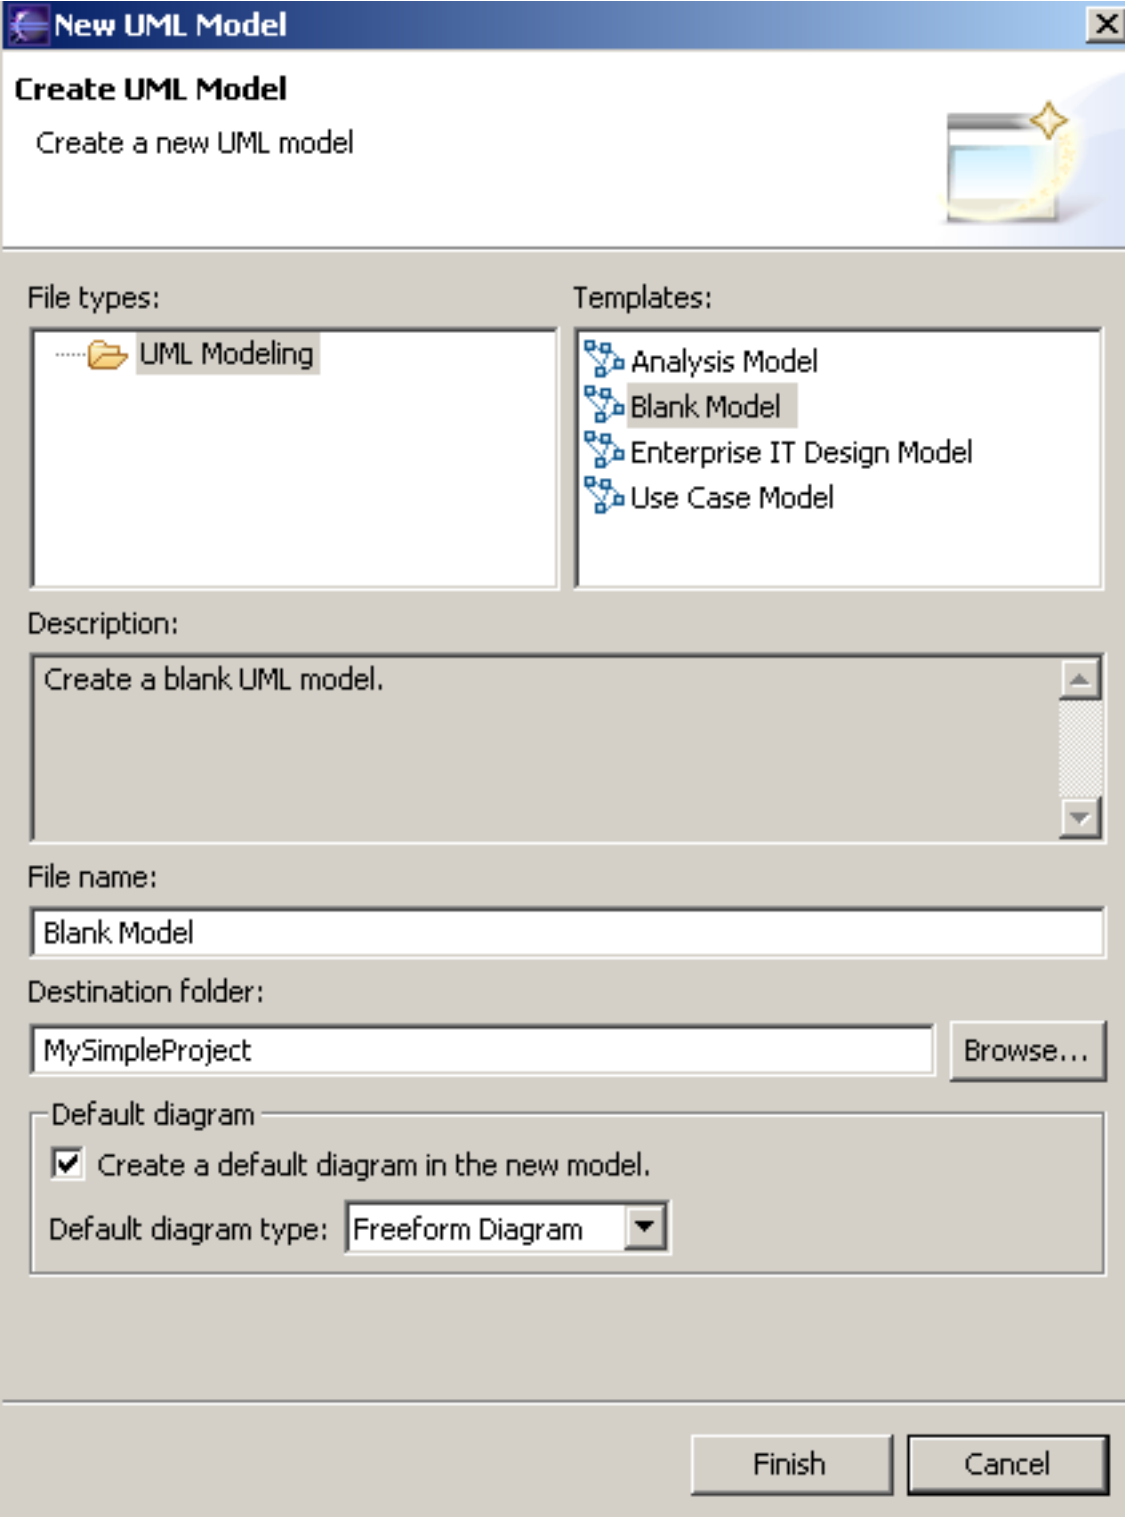

3.2. Update manager site

Follow the instructions described [here](#).

4. User guide

Having installed this plugin, users can edit UML models annotated with the PIM4SOA UML profile. This plugin customises the RSM to define UML models with the appropriate notations. The following steps steer users to create a UML models with the PIM4SOA UML profile:

- Create a new UML project in the RSM workspace File#New#Project#UML project

The image shows a 'New UML Model' dialog box with a blue title bar and a close button. The main area is light gray and contains several sections. At the top, it says 'Create UML Model' and 'Create a new UML model' next to a small icon of a screen with a star. Below this are two columns: 'File types:' with a folder icon and 'UML Modeling' text, and 'Templates:' with a tree view containing 'Analysis Model', 'Blank Model' (highlighted), 'Enterprise IT Design Model', and 'Use Case Model'. A 'Description:' section has a text area with 'Create a blank UML model.' and scroll arrows. Below that is a 'File name:' text field with 'Blank Model'. The 'Destination folder:' section has a text field with 'MySimpleProject' and a 'Browse...' button. The 'Default diagram' section has a checked checkbox 'Create a default diagram in the new model.' and a 'Default diagram type:' dropdown menu set to 'Freeform Diagram'. At the bottom are 'Finish' and 'Cancel' buttons.

New UML Model

Create UML Model
Create a new UML model

File types:
..... UML Modeling

Templates:
Analysis Model
Blank Model
Enterprise IT Design Model
Use Case Model

Description:
Create a blank UML model.

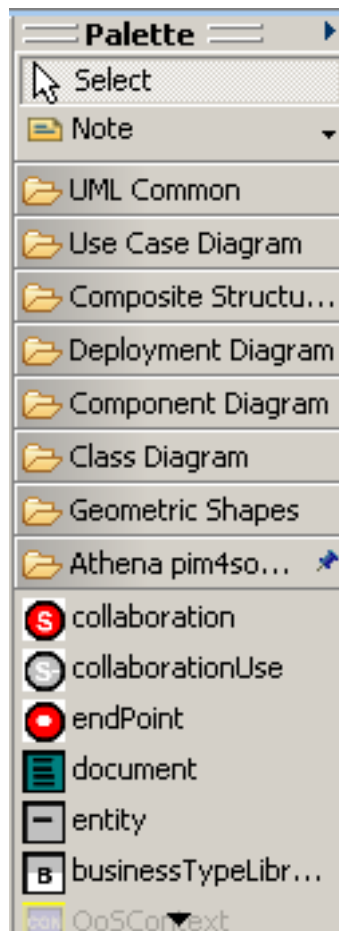

File name:
Blank Model

Destination folder:
MySimpleProject **Browse...**

Default diagram
☒ Create a default diagram in the new model.
Default diagram type: Freeform Diagram

Finish **Cancel**

- The plugin customises the Palette to use the elements described in the UML profile. The following picture shows this situation.

- Users should to drag and drop the elements required from this palette to the diagram. The way in which the elements are placed must be compliant with the meaning described for the PIM4SOA metamodel.
