1. Description

UML profiles for description of WebService artefacts (XSD and WSDL) have been developed. The profiles have been implemented as plug-ins for Rational Software Modeller/Architect. These profiles were developed in the A5 project and are documented in Deliverables D.A5.3 (specification) and D.A5.4 (installation and user documentation).

2. Datasheet

<TBD>

3. Installation guide

The UML profile for Web services has been implemented as a plugin for its use in the Rational Software Modeler (RSM) platform that is based on the Eclipse framework. This plugin customizes the RSM environment being able to use the UML profile for Web services.

- Rational Software Modeler (<http://www.ibm.com>)

3.1. Update manager site

Follow the instructions described [here](#).

4. User guide

<TBD>
